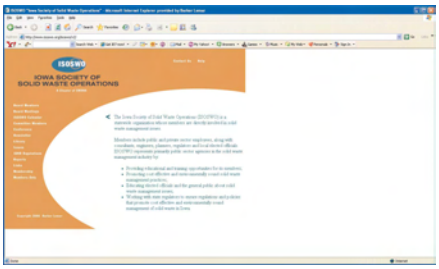
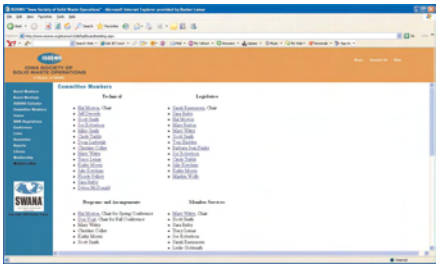
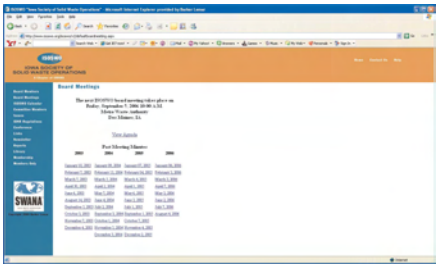
PROJECT SPOTLIGHT | **WEBSITE DEVELOPMENT - IOWA SOCIETY OF SOLID WASTE OPERATIONS (ISOSWO) - DES MOINES, IOWA**







SCOPE OF PROJECT

BARKER LEMAR was contracted by Iowa Society of Solid Waste Operations (ISOSWO) to develop a website for their organization. They wanted a place on the web that all members could go to for current information and other resources. They also wanted a solution for sending mass emails that are time-sensitive, like new rules and regulations.

IMPLEMENTATION

BARKER LEMAR met with ISOSWO representatives to plan and design the website layout and flow that will work for them. The website was designed to be an informational tool and provide resources for ISOSWO members. With all the information given to BARKER LEMAR by ISOSWO, we created a website that has a public section and a members-only section. In the secure members section, the members can download resources from the website. BARKER LEMAR also set up an e-mail list-serve to send emails to ISOWO members. This allows important information to get to all the members quickly and helps them collaborate on projects. The website helps keep all members informed of current events and news related to the solid waste industry.

SERVICES

Web hosting; design services; custom programming; database design; email list servers.
