

SCOPE OF PROJECT

BARKER LEMAR was retained by the Climax Molybdenum Company to renew the landfill operating permit for their industrial landfill.

IMPLEMENTATION

BARKER LEMAR prepared and submitted a site development and operation plan (SDOP) along with the permit renewal. The SDOP was written in the format required by Iowa Department of Natural Resources (IDNR); any designs that were not compliant with current standards had to be brought into compliance.

The existing documents, obtained from the client and the IDNR file room, were reformatted into the IDNR 18 appendix format. In addition, an erosion control plan for the borrow area was developed as required by their current permit.

The final draft of the permit renewal was submitted in November 2005 and approved by the IDNR in February 2006.

SERVICES

Gathering and reformatting of existing documents into the new IDNR requirements; development of an erosion control plan.

TIMELINE

Project Start Date: October 2005

Project Completed: November 2005
