

SCOPE OF PROJECT

BARKER LEMAR was awarded a contract for the State of Iowa to develop, promote, and present a technical workshop to raise awareness of applications for recycled scrap tire products to maintain and improve safe, efficient, and environmentally-sound operations at permitted sanitary disposal landfills in Iowa. The workshop was designed to increase the knowledge of recycled tire applications among engineers, landfill managers, and consulting firms.

IMPLEMENTATION

BARKER LEMAR researched and developed a comprehensive training workshop that incorporated a technical manual, PowerPoint presentation, and case studies of landfill projects that utilized recycled tire products. Workshop topics included: uses for recycled tire products in landfills, ASTM engineering standards engineering characteristics of tires, worker safety and storage criteria, case study reviews of other projects, and state and local approval processes. Class participants registered for the workshop via an online registration form designed by **BARKER LEMAR** and hosted on a web page developed specifically for workshop promotion. **BARKER LEMAR** also developed an interactive PDF version of the technical manual for website downloading and distribution on compact disc.

SERVICES

Development of comprehensive training workshop (technical manual, PowerPoint presentation, case studies, evaluation forms).

TIMELINE

Project Start Date: Spring 2005
Project Completed: Summer 2005
